

Precision OEM Slant-Flow® Screen Grates – the TOP choice for productivity, durability, and value!

Original OEM replacement parts such as hammers, liners and screen grates maximize the long-term value of your machine and ensure ongoing access to TerraSource Global's extensive technical and application expertise that third-party vendors can't match.

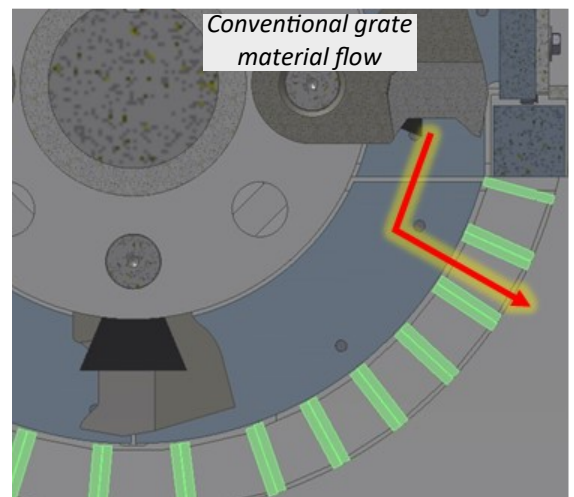

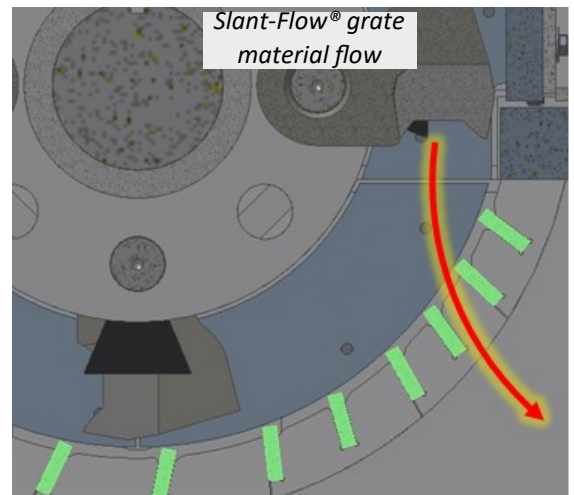

Why Slant-Flow® screen grates are the best choice for your business

More Shredding Action, Faster Material Evacuation
Our Slant-Flow® Screen Grates are angled into the flow of material being shredded, meaning higher performance, less wear on the grates and hammers and more uniform product size.

Less Clogging and Diminished Fines and Pins
Third-party vendors cannot fully and consistently match our unique slant flow screen design that is built specifically for the highest capacity processing.

Minimized Chances of Operational Failure
Every part we sell is built to original OEM specs, with verified highest quality materials, for better performance and less chance of failures that can cause widespread damage to other parts such as hammers and rotors.

Warranty on Workmanship
All of our parts are fabricated by AWS-certified welders. We are so confident about the quality and durability of our parts that we offer fully warranties on workmanship. Most third-part vendors can't offer such assurances.
