

ENDURA HOG
THE BOSS OF MATERIAL CRUSHING™

EnduraHog Flextooth® Hogs

EnduraHogs are the next generation **JEFFREY RADER** workhorse hog, known for decades as the most reliable and durable machine for precise sizing of materials. Available in various sizes and configurations, customers also benefit from re-engineered housings that feature ultra-large access doors and other service-focused design enhancements for the easiest, safest and fastest maintenance.

EnduraHog Flextooth® machines combine the low fines generation of roll crushers with the high-capacity capabilities of impact crushers. Other benefits include...

EZ-Access Technology

EnduraHog Flextooth® builds off Jeffrey Rader's exclusive EZ-Access™ technology with new housing upgrades and ultra-large doors that offer the safest, fastest, and easiest access to hammers, rotor, and liners. Service technicians can quickly perform routine maintenance with minimal downtime and lower risk of injury. No other machines on the market offer customers the Flextooth's mix of performance, ease of use and low cost of ownership.

Hammer Design

Flextooth® hammers' patented cantilevered-movement design flexes hammers out of the crush zone to permit passage of uncrushables while ensuring optimal sizing. Our most innovative and increasingly popular Duratip® high-alloy hammers offer customers a replaceable tip design that maximizes crushing action and enables quick change-out during maintenance periods. Duratip® products are part of our broader Duralife® line of premium, wear-resistant OEM parts, all designed to complement our Brute Armor™ premium screen grates and break bars. Nobody offers a broader portfolio of long-wear, high-performance OEM crushing parts.

Heavy-Duty Rotor Design

Our disc-type rotor is assembled on a high-strength, alloy-steel shaft and is mounted in self-aligning spherical roller bearings in rugged steel housings. Rotor discs allow maximum flexibility of hammer arrangements. Jeffrey Rader rotors can be set up with 3, 4, or 6 rows of hammers for premium efficiency when crushing to a smaller product size.

Slant-Flow® Screen Grates

Slant-Flow® screen grates, unique to our EnduraHogs, are angled into the flow of material being crushed. This patented design enables higher capacity, provides more sheering action and allows the material to evacuate faster. In addition, customers gain additional efficiency and cost-effectiveness due to less clogging and diminished fines, with less chance for overall operational failure.

New Brute Armor™ screen grates now available!

For operations demanding maximum up time and superior tramp-metal resistance, we're proud to introduce Brute Armor™ premium screen grate materials with wear-resistant steel, the strongest and most durable product you can buy.

Flextooth® Dimensions & Weights
